LandXML

- http://www.landxml.org/ (kostenloser Viewer für LandXML 2.0 verfügbar)

Version	Datum
LandXML 0.88	10.07.2000
LandXML 1.0	07.06.2002
LandXML 1.1	21.07.2006
LandXML 1.2	29.07.2008
LandXML 2.0 (Working Draft)	10.06.2016

- Pseudo-Standard
- „Launched January 2000, LandXML.org is committed to providing an non-proprietary data standard (LandXML), driven by an industry consortium of partners. There is no direct cost to join LandXML.org, nor specific level of participation required.”

Anstieg bei der Anzahl der Klassen, Aufzählungstypen und der Anzahl der Attribute im LandXML Quasistandard

```

LandInfra

- Initiiert vom Open Geospatial Consortium (OGC)
- Leitung durch Paul Scarponcini
- 2013 gestartet
- 2014: “OGC Draft LandInfra Conceptual Model”
- 2015: Approval gestartet
- 1. Dezember 2015: December 1, the LandInfraSWG approved the submittal of the OGC® Land and Infrastructure Conceptual Model Standard (LandInfra) 1.0 as OGC 15-111 for processing as an OGC standard
- Basiert auf UML

Sollte ursprünglich auf LandXML 1.2 basieren

Quelle: OGC Land and Infrastructure Conceptual Model Standard (LandInfra) verion 0.2:

- “be supported by a recognized, dependable Standards Developing Organization, OGC”
- “align with existing OGC (and TC211 and SQL/MM) standards, including the modular spec”
- “benefit from functionality already supported by GML, including features, geometry, coordinate reference systems, linear referencing, and surface modeling (TIN)”
- “initially focus on alignments/roads, survey, and land parcels, the subject areas which have identified need and committed resources for development”
- “using modular extensions, be able to expand into other areas (e.g., “wet” infrastructure pipe networks) as resources become available”
- “be use-case driven”

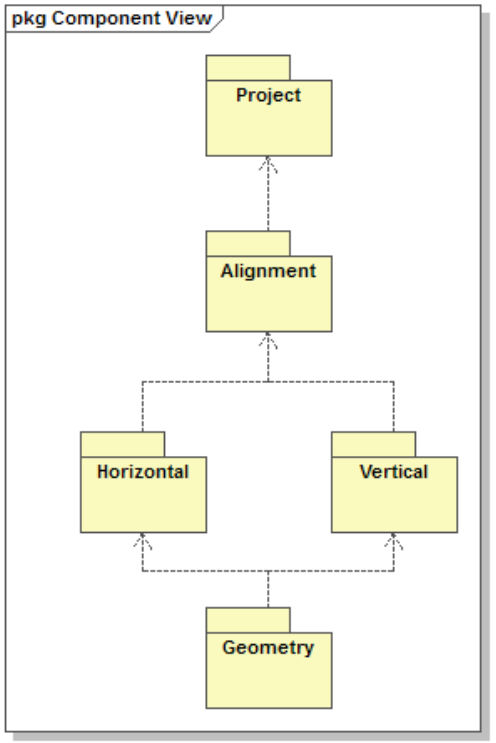
Sollte ursprünglich auf LandXML basieren

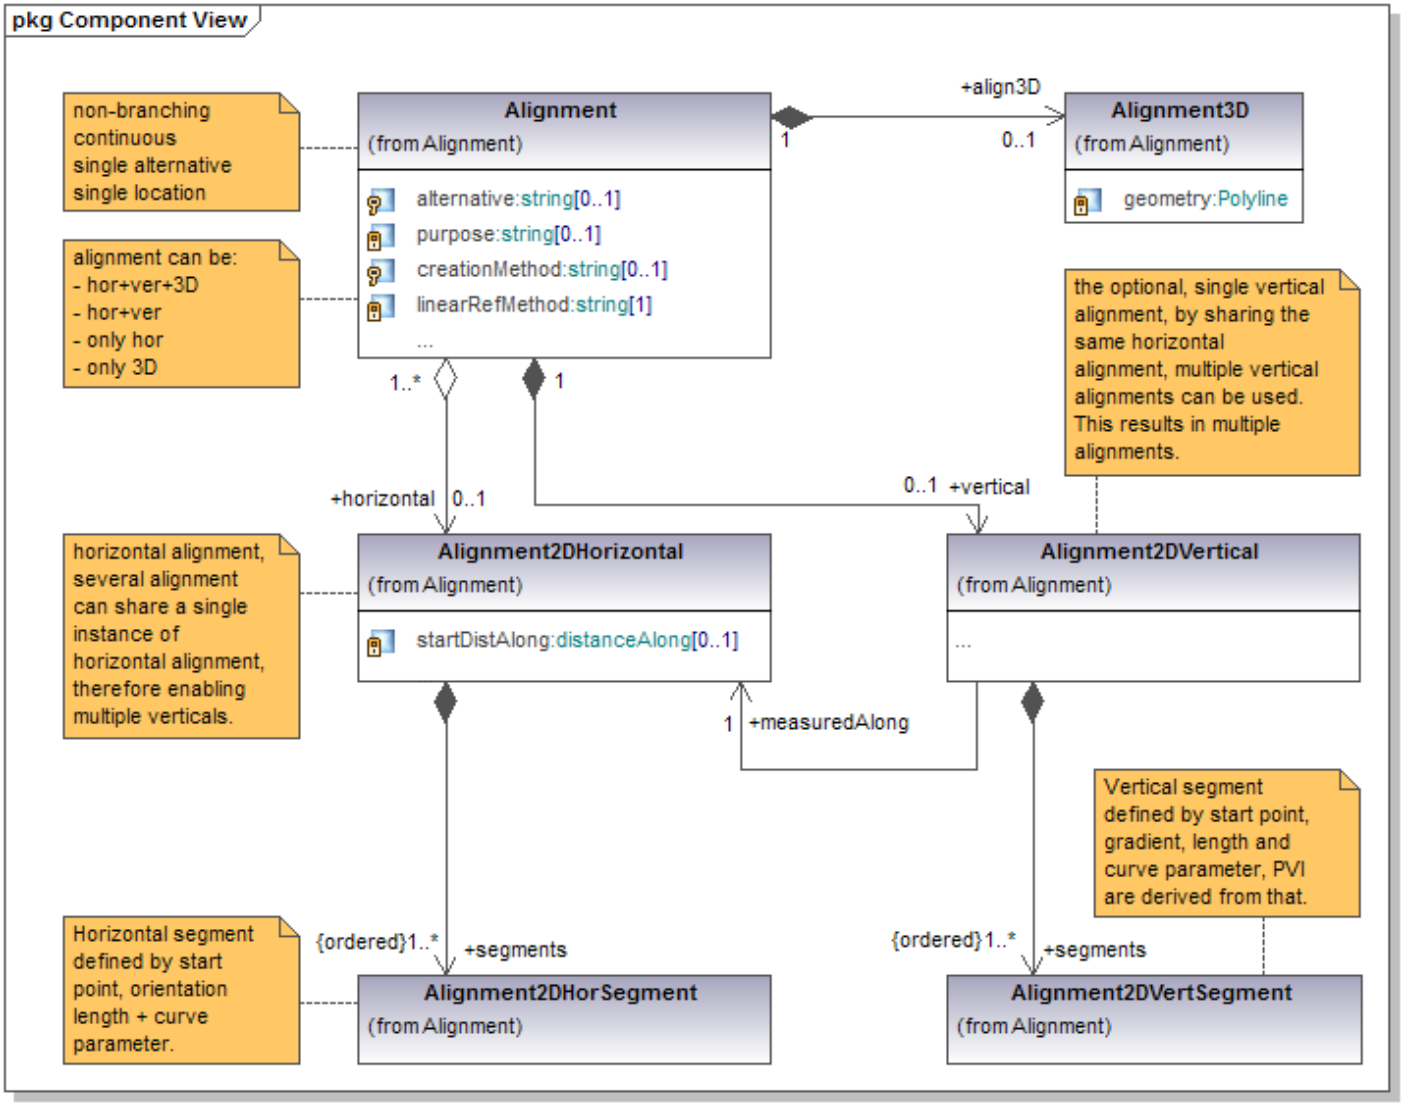
- “be based on a UML conceptual model developed prior to GML (and any other future) encoding”
- “have more up-to-date functionality”
- “be synchronized with the concurrent efforts by buildingSMART International in their development of Infrastructure-based Industry Foundation Classes (IFCs)”
- “be more easily integrated with CityGML and TransXML”

→ Neuentwicklung

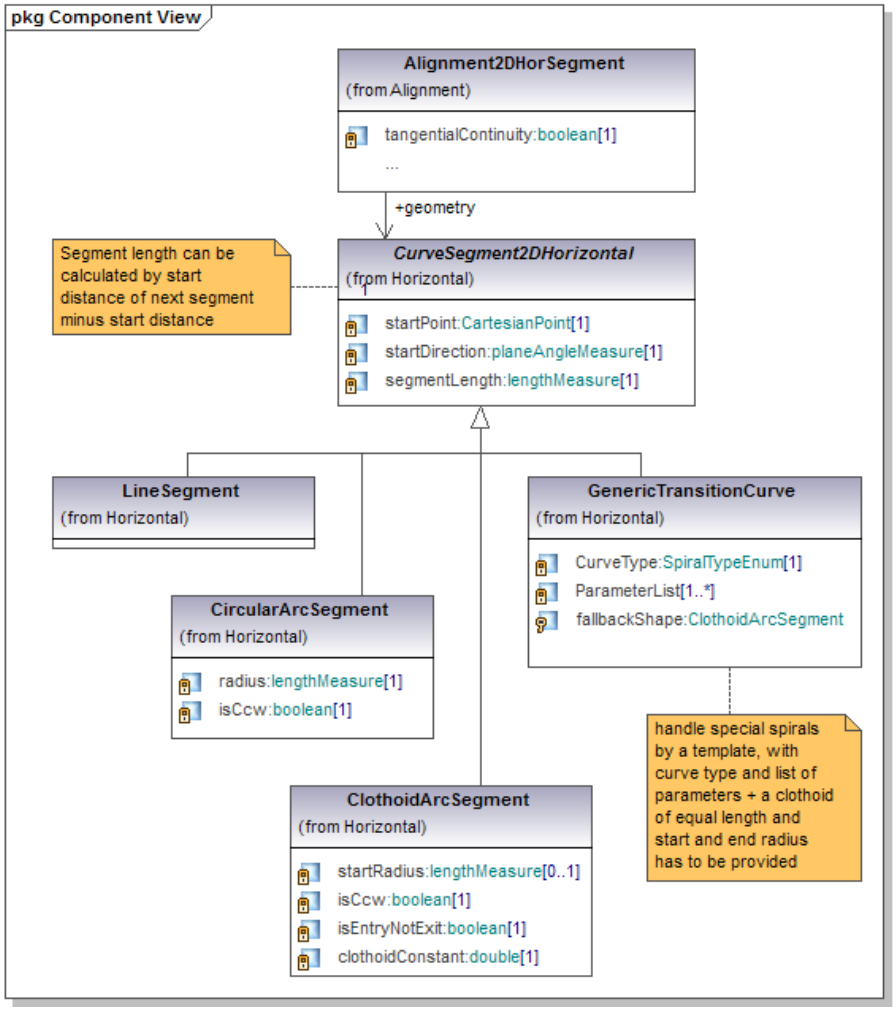
Konzeptuelles Modell

- Gemeinsame Entwicklung mit buildingSMART (IFC Alignment)
- Alignment Modell wurde gemeinsam entwickelt
- Im Rahmen von buildingSMART durch IFC Alignment 1.0 implementiert

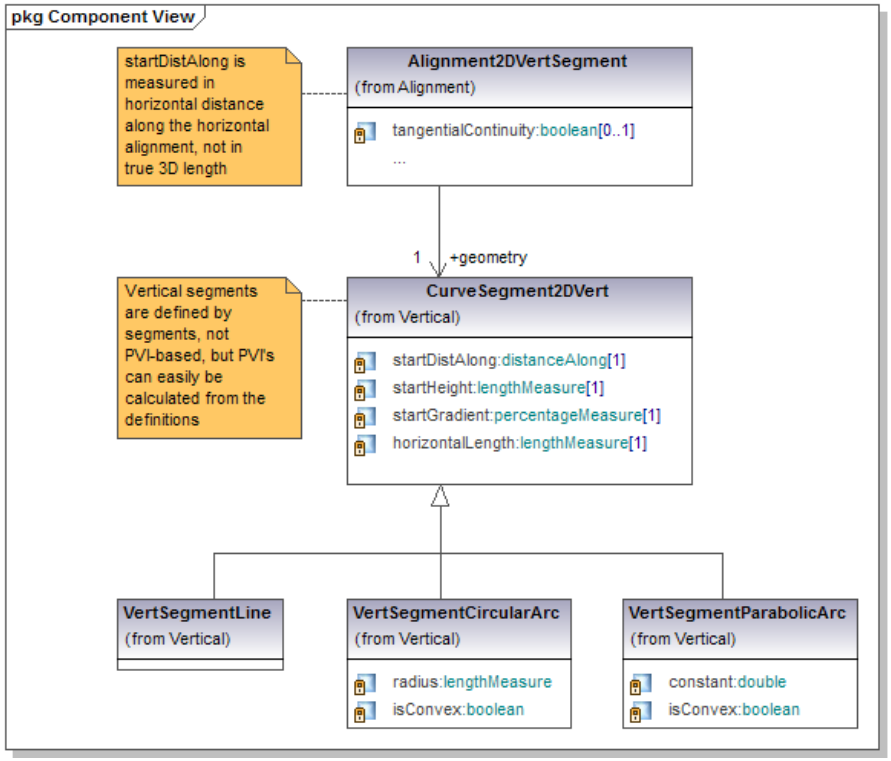




pkg Component View
non-branching
continuous
single alternative
single location
Alignment
(from Alignment)
alternative:string[0..1]
purpose:string[0..1]
creationMethod:string[0..1]
linearRefMethod:string[1]
...
+align3D
1
0..1
Alignment3D
(from Alignment)
geometry:Polyline
alignment can be:
- hor+ver+3D
- hor+ver
- only hor
- only 3D
1..*
1
the optional, single vertical alignment, by sharing the same horizontal alignment, multiple vertical alignments can be used. This results in multiple alignments.
+horizontal
0..1
0..1
+vertical
horizontal alignment, several alignment can share a single instance of horizontal alignment, therefore enabling multiple verticals.
Alignment2DHorizontal
(from Alignment)
startDistAlong:distanceAlong[0..1]
Alignment2DVertical
(from Alignment)
...
1
+measuredAlong
Vertical segment defined by start point, gradient, length and curve parameter, PVI are derived from that.
Horizontal segment defined by start point, orientation length + curve parameter.
{ordered}1..*
+segments
{ordered}1..*
+segments
Alignment2DHorSegment
(from Alignment)
Alignment2DVertSegment
(from Alignment)



pkg Component View
Alignment2DHorSegment
(from Alignment)
tangentialContinuity:boolean[1]
...
+geometry
Segment length can be calculated by start distance of next segment minus start distance
CurveSegment2DHorizontal
(from Horizontal)
startPoint:CartesianPoint[1]
startDirection:planeAngleMeasure[1]
segmentLength:lengthMeasure[1]
LineSegment
(from Horizontal)
GenericTransitionCurve
(from Horizontal)
CurveType:SpiralTypeEnum[1]
ParameterList[1..*]
fallbackShape:ClothoidArcSegment
CircularArcSegment
(from Horizontal)
radius:lengthMeasure[1]
isCcw:boolean[1]
handle special spirals by a template, with curve type and list of parameters + a clothoid of equal length and start and end radius has to be provided
ClothoidArcSegment
(from Horizontal)
startRadius:lengthMeasure[0..1]
isCcw:boolean[1]
isEntryNotExit:boolean[1]
clothoidConstant:double[1]



pkg Component View
startDistAlong is measured in horizontal distance along the horizontal alignment, not in true 3D length
Alignment2DVertSegment
(from Alignment)
tangentialContinuity:boolean[0..1]
...
1
+geometry
Vertical segments are defined by segments, not PVI-based, but PVI's can easily be calculated from the definitions
CurveSegment2DVert
(from Vertical)
startDistAlong:distanceAlong[1]
